DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 3, 5-11 and 18 are rejected under 35 U.S.C. 102(b) as being anticipated by Smith et al (Re. 34,796) [newly cited].

Smith et al in figures 2-3 disclose a distributed antenna array comprising a plurality of antenna elements 220, a plurality of power amplifiers 205, each power amplifier being operatively coupled with one of the antenna and mounted closely adjacent to the associated antenna element, such that no appreciable power loss occurs between the power amplifier and the associated antenna element and each power amplifier comprising a relatively low power, linear power amplifier.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2821

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 2, 4, 12-17 and 19-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Smith et al in view of Carloni et al (5,815,115).

Smith et al have been discussed above but fail to teach a first/second DC bias tee mounted on the tower/support structure and operatively coupled with the antenna structure. However, Carloni et al in figures 2-7 disclose a first/second DC bias tee mounted on the tower/support structure and operatively coupled with the antenna structure. It would have been obvious to one of an ordinary skill in the art at the time the invention was made to employ the DC bias tee as taught by Carloni et al for the purpose of separating the RF signaling from the DC power supply current in the RF feeder cable and also for providing the DC power supply current to the local power supply of the tower mounted amplifier.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Art Unit: 2821

The patents to Scherzer et al and O'Malley et al are cited as of interest and illustrate a similar structure to each linear power amplifier being operatively coupled with one of the antenna and mounted closely adjacent to the associated antenna element.
